Roomba 700 Series Comparison

Roomba 780

Roomba 790

The Roomba 700 series is a line of robotic home vacuum cleaners that is produced by American technology company iRobot. The Roomba was first released in 2002. These devices are unique because the company doesn't closely guard the technology that makes these little robots. Instead, they actively seek audience input, and make the Roombas easy to hack and modify. This is all done with the goal of allowing customers to experiment and improve the device. Roombas operate on two independent wheels, which allow it to turn in place. They also feature several sensors that help them to detect obstacles such as walls or stairs. The cleaning devices and sensors on a Roomba vary from model to model. Earlier models needed to have the size of the room programmed into them and got stuck on thick carpet, but later ones used sensors to judge distances to a wall and were compatible with all kinds of flooring. To identify the model number of the Roomba, turn it over. The number should be written on the underside, near the left wheel. The first digit in the model number refers to the series that the Roomba is a part of (for example, the 770 is part of the 700 series). Roomba - Wikipedia iRobot 700 Series Support Emptying the bin You should do this after each use. Ensure proper insertion of the bin each time as Roomba will not run without it. Cleaning the two rollers Alters Regular cleaning is important and you should replace the rollers after two months of regular use. Cleaning the brushes and associated parts 1. Remove brush guard by lifting both yellow tabs. 2. Remove and clean the two brushes and brush bearings. 3. Use the included cleaning tool to remove hair easily from the bristle brush by pulling it over the brush. Essential Maintenance | Bearings 9 Step by step 4. To clean the side brush, use a small from the center. Remove the brush, clean, reinstall. Cleaning the front wheel 2. Remove any debris from inside the wheel cavity. 3. the wheel from its housing and clear any hair wrapped around it. 4. Reinstall all parts when finished. Make sure the wheel clicks right back into place. Cleaning the bin sensors (models 770 and above only) Remove the bin and wipe the two optical bin sensors with a clean, dry cloth. Cleaning the cliff sensors Simply wipe all six cliff sensor openings with a clean, dry cloth. Troubleshooting Occasionally, something can go wrong. But don't worry there's an early warning system. Your Roomba will tell you what the problem is. The troubleshooting light will also blink. To repeat an error message, just press CLEAN.
